

Smart Monitor Expands Global Availability of Award-Winning SmartWatch
International Distributors Now Include Eastern Europe, United Kingdom, Ireland and Pacific Rim

SAN JOSE, Calif – APRIL 9, 2014 – Smart Monitor (www.smart-monitor.com) today announced the global availability of its award-winning SmartWatch® via certified distributors in the United Kingdom, Ireland, Eastern Europe and Pacific Rim. The SmartWatch, winner of the prestigious 2014 CES Health Innovation Award, continuously monitors for specific patterns of abnormal movements and instantly alerts connected family members and caregivers upon the onset of repetitive, irregular shaking motion.

“Tens of millions of people around the world are affected by seizure and tremor-related disorders,” said Paul Cullen, Managing Director, Independent Health Service Ltd. “The SmartWatch platform addresses the challenges these growing chronic health issues present and we are proud to be a global distributor of an unparalleled solution.”

“As chronic health issues continue to escalate, we are happy to extend our product to these new regions,” said Anoo Nathan, CEO, Smart Monitor. “Our solution is not only giving people the ability to easily manage and track their health status, but is also improving the quality of life for patients and their caregivers alike.”

The SmartWatch is a non-invasive wristwatch that serves as a safety net for people with seizure and tremor-related disorders. When a repetitive shaking motion is detected, the SmartWatch sends out alerts with details surrounding the shaking episode, while also recording valuable data that can later be accessed by the patients and sent to their care providers. The SmartWatch is resulting in increased independence and confidence for those affected by the disorders and giving peace of mind to these individuals, their families and caregivers.
